BRT Laboratories, Inc. is proud to announce the launch of tuberculosis testing utilizing the T-SPOT[®].TB test from Oxford Immunotec.

As of November 1, 2009, the CDC updated guidelines that now allow administration of an interferon gamma release assay (IGRA), such as T-SPOT[®].TB, to be used in place of the tuberculin skin test (TST) in all U.S. Citizenship and Immigration Services (USCIS) applicants 2 years of age and older. T-SPOT[®].TB may reduce overall costs of TB screening as prior vaccinations of Bacille Calmette-Guerin (BCG) do not affect test results and there is no need for a return visit. T-SPOT[®].TB is also recommended in many specialized groups most at risk for latent TB.

Sample pick-up can be arranged through a courier service or Fed Ex. Samples must arrive at the laboratory within 24 hours of collection and results are reported back to the physician within 48 hours of sample receipt. The current price for the test is \$125/sample; we accept payments via credit card to ensure quick payment and reporting.

Call us at 443-449-2127 or e-mail today at tb@brtlabs.com so we can set up this service for you and your clients.

BRT Laboratories, Inc., headquartered in Baltimore, Maryland, provides immigration and paternity DNA testing, forensics testing, TB screening, and custom clinical testing development services.
